

These three (3) identical files of the Sequence Listing file "2001-06-22 2750-1096P Sequence Listing.txt" on each CD-R, in no way introduce new matter into the specification.

Also on the two (2) identical CD-Rs labeled "Copy 1" and "Copy 2" is an amended version of the Protein Domain Table, file "2750-1096P Protein Domain Table.txt", submitted in a clean form without markings as to amended material. The Protein Domain Table was previously submitted in paper form as pages 63 through 1015 of the specification, as the PTO had not yet created the rules (37 CFR § 1.52 (e)) for submitting large tables on CD-R. The amendments to the Protein Domain Table are being made to reference the sequences containing four or more amino acids disclosed in the specification by their SEQ ID NOS. No new matter is introduced by these amendments or by the submission of the protein domain table on CD-R instead of on paper.

As required under 37 C.F.R. §1.121, a marked-up copy of the Protein Domain Table, file "2750-1096P Marked-Up Protein Domain Table", is enclosed herewith on a fourth compact disk labeled "Disk with Markings". This marked-up copy file shows the matter being added to and the matter being deleted from the Protein Domain Table of record. This file shows the material being added to the Protein Domain Table by including the tags "<u>" before and "</u>" after any amendments that were added to this file. Any material deleted from the Protein Domain Table of record is tagged with a "<b>" before and a "</b>" after the deleted material. No new matter is being added by these amendments.

The format for submitting these amendments made to the Protein Domain Table filed on CD-R and for submitting a marked-up version of the changes made to the Protein Domain Table on CD-R was recommended by Michael Lewis and Joe Narcavage from the Office of Patent Legal Administration who indicated that this was currently the most acceptable format for

amending CD-R files. Submitting substitute compact disks gives the Patent Office the advantage of saving the time needed to enter the large volume of amendments in the specification and reducing the number of printing errors. It also saves the Applicant and the Patent Office the space needed to print and store the 800+ pages associated with the paper copy of the file ""2750-1096P Protein Domain Table.txt"".

A three (3) month(s) extension of time for the filing of the present paper in accordance with the provisions of 37 C.F.R. §1.136 and 37 C.F.R. §1.17 has been petitioned for and the applicable fees have been paid in the accompanying response to the Notice to File Missing Parts filed on June 22, 2001 for the present application number.

If the Primary Deposit Account No. 50-1055 is deficient and non-payment will result in a loss of rights, the Commissioner is hereby authorized in this, concurrent and future replies, to charge payment or credit any overpayment to Deposit Account No. 02-2448 for any additional fees required under 37 C.F.R. § 1.16 or under 37 C.F.R. § 1.17; particularly, extension of time fees.

Respectfully submitted,  
BIRCH, STEWART, KOLASCH & BIRCH, LLP

Version of Paragraph Amendments Showing Changes:

(added material is in Bold and Underline, deleted material is in brackets)

Please replace the paragraph beginning on page 62, line 22 with the following amended paragraph:

--The polypeptides of the invention may possess identifying domains as shown in Table 1. Specific domains within the MLS encoded polypeptides are indicated in Table 1. In addition, the domains within the MLS encoded polypeptide can be defined by the region that exhibits at least 70% sequence identity with the consensus sequences listed in the [detailed description below] **Protein Domain Table** of each of the domains.--

Please replace the paragraph beginning on page 62, line 27 with the following amended paragraph:

--The majority of the protein domain descriptions [given below]**in the Protein Domain Table** are obtained from Prosite,  
(<http://www.expasy.ch/prosite/>), and Pfam,  
(<http://pfam.wustl.edu/browse.shtml>). --
